chapter04

플레이어 구현

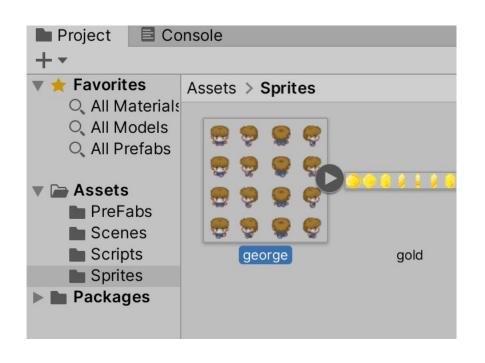

- 1. 플레이어 만들기
- 2. 플레이어 애니메이션
- 3. 키보드로 움직이기
- 4. 마우스로 움직이기

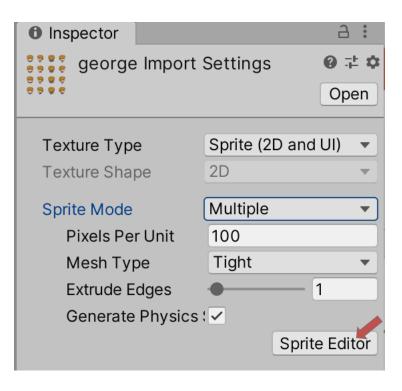

https://github.com/jongukjeong/unity

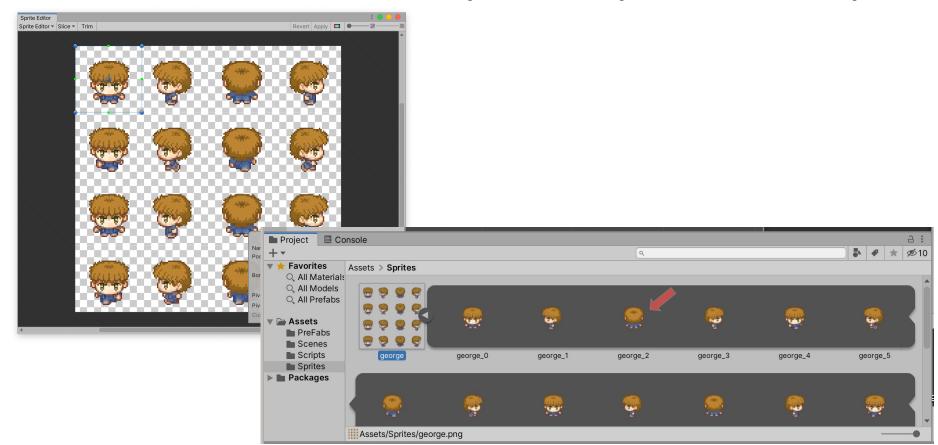

■ 플레이어로 사용할 이미지 선택 – Instpector 에서 Sprite Mode -> Multiple

■ 플레이어로 사용할 이미지 선택 – Instpector 에서 Sprite Mode -> Multiple

01 플레이어 만들기

■Instpector 의 Sprite Renderer : Order in layer -> 2

george Import Settings

■ Sprite 의 george 선택 후 Inspector 의 Pixels Per Unit -> 32

Game

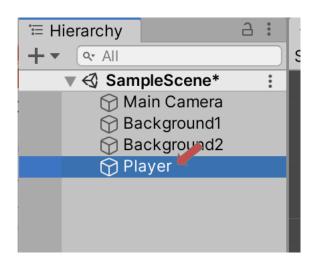

Display 1 ▼ vertical2 (1080:1920)

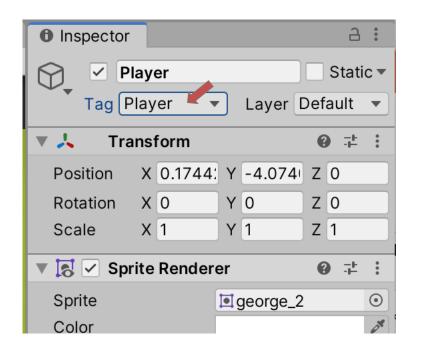

■ George -> Player 로 이름 변경 및 Tag 적용

■ George 4 이미지를 씬뷰로 드랍 후 Play

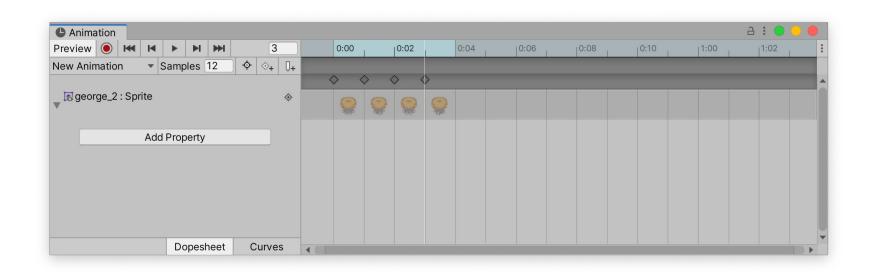

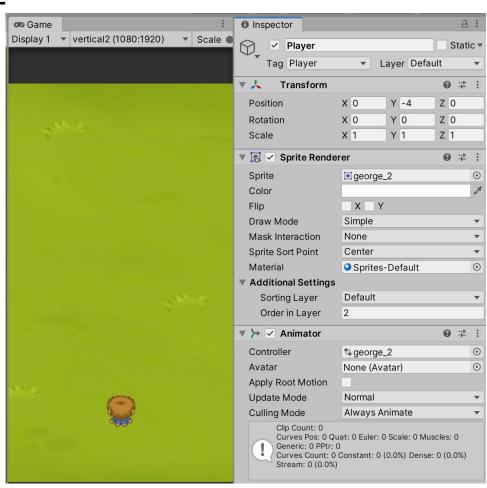

■ Player 객체를 애니메이션 에디터로 수정 가능

02 플레이어 애니메이션

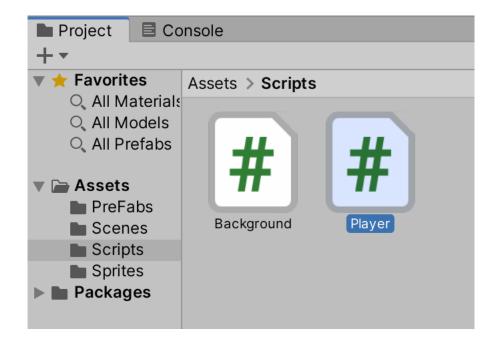

d unity

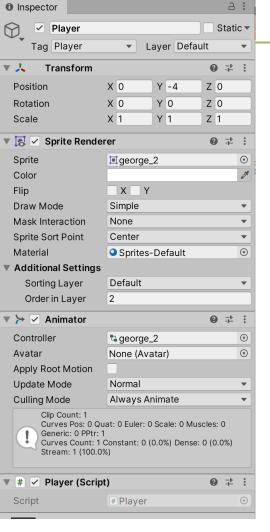

■ Player 객체 정리

03 키보드로 움직이기

■ Script 파일 준비 및 Player 컴포넌트에 추가

■ 키보드로 입력받은 값을 transform 으로 전달 하는 내용 작성

```
[SerializeField]
private float moveSpeed;
// Update is called once per frame
void Update()
    float horizontalInput = Input.GetAxisRaw("Horizontal");
    float verticalInput = Input.GetAxisRaw("Vertical");
   Vector3 movoTo = new Vector3(horizontalInput, verticalInput, 0f);
    transform.position += movoTo * moveSpeed * Time.deltaTime;
```

■ 좌우로만 움직이게 하려면 ? 이동속도 변경?

```
[SerializeField]
private float moveSpeed;
// Update is called once per frame
void Update()
    float horizontalInput = Input.GetAxisRaw("Horizontal");
    float verticalInput = Input.GetAxisRaw("Vertical");
    Vector3 movoTo = new Vector3(horizontalInput, verticalInput, 0f);
    transform.position += movoTo * moveSpeed * Time.deltaTime;
```

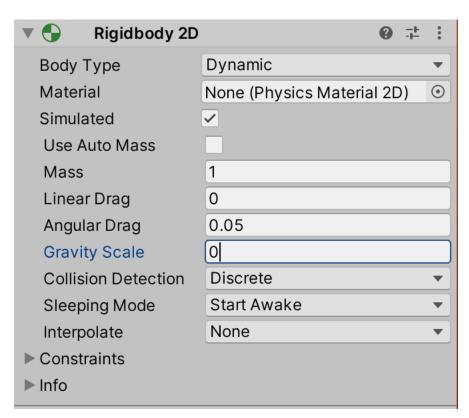

■ 좌우로만 움직이게 하려면 ? 이동속도 변경?

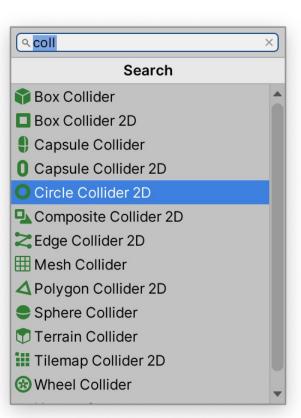

```
// float horizontalInput = Input.GetAxisRaw("Horizontal");
// float verticalInput = Input.GetAxisRaw("Vertical");
// Vector3 movoTo = new Vector3(horizontalInput, verticalInput, 0f);
// transform.position += movoTo * moveSpeed * Time.deltaTime;
Vector3 movoTo = new Vector3(moveSpeed * Time.deltaTime, 0, 0);
if(Input.GetKey(KeyCode.LeftArrow)){
    transform.position -= moveTo;
}else if(Input.GetKey(KeyCode.RightArrow)){
    transform.position += moveTo;
```

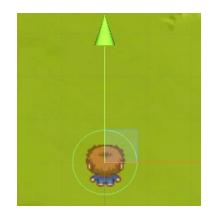

- 좌우 움직임 폭 제한
- 1. Add component 로 rigidbody 2d 추가 후 Gravity Scale 0 로, Circle Collider 추가

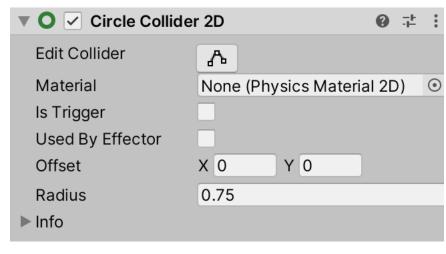

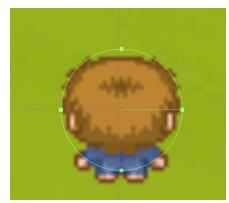

- 좌우 움직임 폭 제한
- 1. Edit Collider 로 충돌 영역 변경 지정

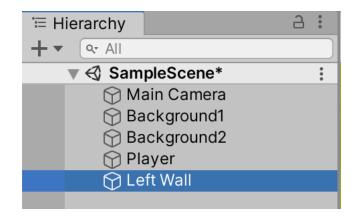

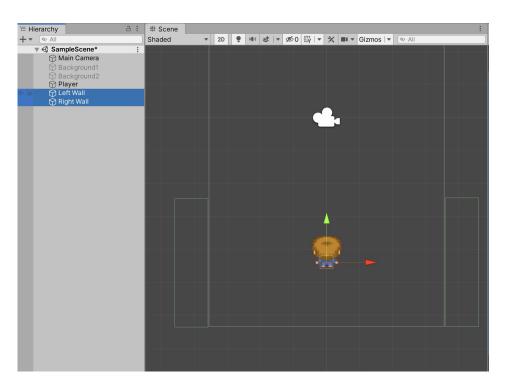

03 키보드로 움직이기

- 좌우 움직임 폭 제한
- 1. Create Empty 로 빈 객체 만들고 이름을 Left Wall
- 2. Add Component 로 Box Collider 추가

■ 마우스 좌표 콘솔에 찍어보기

04 마우스로 움직이기

■ 마우스 좌표와 transform 좌표를 변환해야 한다

```
Vector3 mousePos = Camera.main.ScreenToWorldPoint(Input.mousePosition);
//Debug.Log(mousePos);
transform.position = new Vector3(mousePos.x, transform.position.y, transform.position.z);
```

04 마우스로 움직이기

■ Mathf.Clamp() 로 좌우 움직임 폭 제한

```
Vector3 mousePos = Camera.main.ScreenToWorldPoint(Input.mousePosition);
float toX = Mathf.Clamp(mousePos.x, -2.35f, 2.35f);
transform.position = new Vector3(toX, transform.position.y, transform.position.z);
```
